

# ADVANCED FETAL MONITORING

## A Multidisciplinary Approach

Lisa A. Miller, CNM, JD

MARCH 19, 2010, 07:30—15:00  
Kaweah Delta Medical Center  
400 W Mineral King Ave, Visalia, CA 93291  
Blue Room (Basement of Medical Center)

**TARGET AUDIENCE:** Today's clinicians that rely on FHR monitoring as an integral component for complex, critical evaluation in clinical practice.

### Lisa A. Miller, C.N.M., J.D.

President of Perinatal Risk Management and Education Services (PRMES), Ms. Miller is a certified nurse midwife with over 30 years of experience in a variety of clinical settings. Also an attorney, she has a unique understanding of the impact of law on medicine & nursing. Ms. Miller served as an Assistant Professor in Obstetrics and Gynecology at Northwestern University Medical School and is published in the areas of electronic fetal monitoring, obstetrics, and patient safety. Committed to improving the quality of perinatal health care, she lectures nationally and internationally on a variety of obstetric, perinatal safety, and risk management topics; currently focusing on the effects of cognitive bias during healthcare decision-making. Co-author of Mosby's Pocket Guide to Fetal Monitoring: A Multidisciplinary Approach, Ms. Miller teaches physicians, nurses, and midwives how to apply a standardized approach to electronic fetal monitoring interpretation and management. She is an active member of both AWHONN and ACNM, and serves on ACNM's Quality Management committee. Ms. Miller is on the editorial board of the Journal of Perinatal and Neonatal Nursing, and provides peer review for the Journal of Midwifery and Women's Health.

### OBJECTIVES:

- Identify common areas of team failure related to EFM.
- Describe and discuss clinical implications of FHR and uteroplacental physiology.
- Define a common FHR terminology based on NICHD nomenclature.
- Apply an evidence-based approach of standardized interpretation and management to electronic fetal monitoring.
- Identify normal cord blood gases, differentiate between respiratory & metabolic acidemia.
- List a variety of risk reduction strategies achieved by the proper integration of standardization, communication and teamwork into perinatal care.

### AGENDA:

7:30 - 8:00	<b>Registration &amp; Continental Breakfast</b>
8:00 - 8:30	<b>Metacognition, Human Factors, &amp; Error in EFM</b>
8:30 - 10:00	<b>Physiology Review &amp; Understanding Acid-Base</b>
